LOK-LOOP

Security Anchor "LOK-LOOP"

LOK-LOOP is a tamper resistant security anchor specifically designed for chaining up motorcycles, quad bikes, jet skis, trailers, boats and your more portable items such as welders, generators, compressors and ride on lawn mowers.

Over 5000 motorcycles are stolen every year in Australia and most never recovered, especially if not registered or dirt bikes. We have developed the "LOK-LOOP" security anchor as a new concept in floor anchors, which is designed to be used in conjunction with a hardened padlock and chain or cable. You can see more photos in our [LOK-LOOP Brochure](#).

The loop is made from 8mm x 50mm hardened & tempered steel. The fixings are hardened drill resistant 10mm x 75mm Anka Screws, made tamper resistant by hammering in a ball bearing to the hex drive of the head, & also by the counter-sunk tapered design of the washers, making grabbing the head impossible.

The product comes complete with Masonry Drill Bit for drilling the concrete, long Hex wrench allen key for screwing down the fixings, and 2 ball bearings to complete the installation.

LOK-LOOP Security Anchor

MOTORCYCLE & EQUIPMENT SECURITY “FLOOR ANCHOR”

“Many Motorcycles are stolen each day”

The LOK-LOOP is ideal security for Motorcycles,
Quad Bikes, Boats, Jet Skis, Trailers, Caravans, Camp
Trailers, Generators, Welders, Compressors and Ride on
Lawn Mowers.

Each year over 5000 motorcycles are stolen in Australia. Some stolen and stripped for spare parts, others are untraceable such as off road dirt bikes. For these reasons some insurance companies make it a condition of insurance that a motorcycle be chained up.

The LOK-LOOP is made from 50mm x 8mm high quality hardened and tempered hacksaw

resistant steel.

The fastener washers have been designed with a tapered design, making grabbing them impossible.

The fasteners are two 10mm x 75mm anka screws. They are hardened and drill resistant. The anka screws are screwed into the concrete, tightened up, then a ball bearing is hammered into the head of the fastener to make them tamper resistant.

The LOK-LOOP comes complete with a 10mm masonry drill bit, 2 Anka Screws and tapered washers, 1 long series 8mm Hex Wrench, 2 ball bearings and fitting instructions. Making installation simple and no additional cost.
